## INTERNATIONAL PROJUMINARY EXAMINATION REPORT

v.	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
	citations and explanations supporting such statement

1. Statement			
Novelty (N)	Claims	3-5, 10	YES
	Claims	1, 2, 6-9	NO
Inventive step (IS)	Claims		YES
	Claims	1-10	NO
Industrial applicability (IA)	Claims	1-10	YES
	Claims		NO

2. Citations and explanations

## 1. Prior art

This report refers to the following search report citations as indicated below; the numbering will be retained throughout the procedure:

D1: US 3 476 326 A

D2: US 4 583 455 A

D3: EP 0 335 925 B

D4: US 4 581 798 A

D5: US 862 975 A.

#### 2. Claim 1 (Novelty)

D1 describes a method of husking and degerminating cereals and the like, in particular grains of maize, wherein the grains are first cleaned and wherein the grains are degerminated immediately or following surface moistening (column 1, lines 50-63, "the maize pretreated by moistening is initially subject to a decorticating step"; in D1 the degerminating is done after a surface moistening and thus "immediately or after a surface moistening").

D1, then, has all the features of claim 1, and so the

## INTERNATIONAL PRESENTINARY EXAMINATION REPORT

subject matter of the latter is not novel (PCT Article 33(2)).

### 3. Dependent claims 2-5

The additional features of dependent claim 2 are also known from D1 and therefore do not contribute to novelty either.

The additional features of dependent claim 3 relate to the application of the claimed method to a device for husking and degerminating, said device having a mill with projecting parts.

Such a device is known from D2.

Therefore, a combination of these features with those of claims 1 or 2 does not appear apt to justify an inventive step (PCT Article 33(3)).

The additional features of claim 4, "aspiration of the grains of maize", are known from D3 as purely routine for a person skilled in the art.

Therefore, a combination of these features with those of claim 1 does not appear apt to justify an inventive step (PCT Article 33(3)).

The additional features of dependent claim 5 with the teaching of carrying out the comminution without intermediate screening between comminution steps are also known from D3.

Therefore, a combination of these features with those of claim 4 does not appear apt to justify an inventive step (PCT Article 33(3)).

#### 4. Claim 6 (Novelty)

# INTERNATIONAL PRESEMINARY EXAMINATION REPORT

Since the features of the device according to the preamble of claim 6 are known to a person skilled in the art as ordinary structural measures, and since the invention of D4 relates to a rotor of such a device, D4 as formulated does not explicitly describe these features. However, for a person skilled in the art they are implicit (see for example D5, fig. 1 and 2).

In addition, D4 describes a rotor consisting of a hollow shaft (20) that is surrounded in the processing zone by an outer mill (4), said mill (4) having at least two projecting parts (26) (fig. 3-7).

Since D4 shows all the features of claim 6, the subject matter of the latter is not novel (PCT Article 33(2)).

### 5. Dependent claims 7-10

The additional features of dependent claims 7-9 are also known from D4 and therefore do not contribute to novelty.

The additional features of dependent claim 10, "aspiration of the grains of maize" are known from D3 as purely routine for a person skilled in the art.

Therefore, a combination of these features with those of claim 6 is not apt to justify an inventive step (PCT Article 33(3)).
